READ, RATE, AND REVIEW

The Declaration of Independence Continued
 We, therefore, the Representatives of the united States of America, in General Congress, Assembled, appealing to the Supreme Judge of the world for the rectitude of our intentions, do, in the Name, and by the Authority of the good People of these Colonies, solemnly publish and declare, That these United Colonies are, and of Right ought to be Free and Independent States; that they are **Absolved** from all **Allegiance** to the British Crown, and that all political connection between them and the state of Great Britain, is and ought to be totally dissolved;

What?
 As **representatives** of the American people, we declare these colonies to be free states. The King is no longer our ruler. We break all ties with Great Britain.

Every colony sent a delegate to the Second Continental Congress. These delegates tried to vote as the people in their colonies would have voted.

members of the Second Continental Congress

absolve — to release
 allegiance — duty and loyalty

Lexile Benchmark Test

Choose the best words that would fill in the blanks.

Please complete our benchmark test so that we can recommend books for you. Thank you!

Because winters on the tundra are so long and cold, tundra plants have only a short time to grow. Many plants on the alpine tundra grow in a thick cushion close to the ground. This cushion traps the sun's heat. Inside the cushion, the may be more than 65 Fahrenheit (18 Celsius) warmer than out-side. Insects like these warm places.

For several months, the plants of the arctic tundra get sunlight all the time. They spring up quickly and send roots into the soil. But the roots cannot grow deeply because they hit the permafrost. Shrub willow grows only one to two inches high in the tundra and Arctic Ocean.

Most tundra plants are short heaths, grasses, mosses, and lichens. Sedges are flowering plants that look like grass. Heaths are woody shrubs. Mosses are small plants that need wet soil to grow.

A lichen is actually two plants living together. In a lichen, a plant called a(n) makes food for another plant called a fungus.

BENCHMARK TEST

Students are challenged to increase your (their) Lexile® score. After approximately five books or three hours of reading are completed, the benchmark test will update the Lexile® level. Based on the results, the recommended book tab will change.
